

FOR STEVE + ALPHA STAFF

Alpha Rhythm - Staff Input Note

Five decisions needed to turn the working app into Alpha's semester programme

PURPOSE Please capture real operating answers from the Alpha team. The app already works; these responses will determine the rules, reporting and next build for the 25 students.

Suggested note from Steve to the Alpha team

We have a working student self-management app called **Alpha Rhythm**. It is designed to help students build consistent practice, reading/study, reflection and physical wellbeing habits while setting three clear daily deliverables. Before we lock the semester version, I need your practical answers to the five questions below. Short answers are fine; specific examples are even better.

Five inputs we need

1. What should success look like by the end of the semester?

Identify the 4-6 outcomes Alpha most wants the programme to reinforce. Examples could include consistent individual practice, punctuality/attendance, performance readiness, coursework/reading, professional behaviour, self-direction and wellbeing.

ALPHA RESPONSE: _____

2. What should every student actually do each day and each week?

For each activity, tell us whether it is mandatory, recommended or individually set, and give a target where possible: practice minutes, reading/study, mindfulness/quiet reflection, exercise, rehearsal preparation, assignments, ensemble work or anything else.

ALPHA RESPONSE: _____

3. Which real Alpha deliverables should appear inside the app?

List the recurring rehearsals, assignments, assessments, performances, repertoire goals, technique targets or programme milestones. Also tell us whether students should enter these themselves or faculty should eventually assign them.

ALPHA RESPONSE: _____

4. What should mentors/faculty be able to see - and what should stay private?

For the pilot, students can generate a weekly summary. Confirm whether faculty should see completion percentage, practice minutes, missed days, goals and weekly reflections. Confirm whether private daily reflection remains completely student-only and who reviews the weekly summary.

ALPHA RESPONSE: _____

5. How should the accountability rhythm work in practice?

Define the weekly check-in: who reviews it, how often, roughly how long it should take, what happens after repeated missed commitments, and whether Alpha wants positive recognition or milestones. Please also confirm semester start/end dates and any device/connectivity constraints.

ALPHA RESPONSE: _____

Two useful confirmations

Programme name: keep "Alpha Rhythm - Practice. Purpose. Progress." or use another name? Response:

Longer-term model: central faculty dashboard, or a student-owned app plus weekly mentor summary?

Response: _____

What is already working

The current build already includes the Alpha branding and home-screen logo, student onboarding, My 3 daily deliverables, practice/reading/mindfulness/exercise tracking, semester goals, progress charts, weekly check-ins, mentor summaries, exports and local-device privacy.

WHAT HAPPENS NEXT Send the completed note back to Richard. Those answers can be translated directly into the next Alpha-specific build.
